

STEP 3

How to Discard Old Carbon

Carefully pick up the air purifier at the base of the unit and discard the old, saturated carbon into a suitable trash can. (photos L and M).

WARNING: DO NOT take hold of the unit at the top as this may bend the frame of the unit, making it difficult to replace the top.

STEP 4

Funnel & New Carbon

After discarding the old saturated carbon, use the provided funnel to pour the fresh activated carbon into the unit. For proper placement, align and place the funnel on the 3 metal posts (photos N and O).

Next, evenly distribute the NEW activated carbon around the funnel until the unit is full (photos P and Q).

Additional Maintenance

Regular Maintenance of The One That Works unit working at peak performance and keep your extended warranty current.

Washable Dust Filter

Wash the dust filter approximately once per month. The dust filter slides off the air purifier like a sleeve. To wash the dust filter, use a mild detergent and cool water. Wash the dust filter by hand or on a gentle cycle in a washing machine. Air-dry the filter - **DO NOT** put the filter in the dryer. After the filter is dry, simply slide it back on the air purifier.

Additional Motor Care

Every 6 months, add a few drops of electric motor oil (3-in-One, or any automobile oil). Insert the nozzle on the oil container into the oil hole (photo S). By lubricating the motor with oil every 6 months, you will add years of life to the motor.

SYSTEMS

Learn how to keep your air clean and healthy with The One That Works™. Contact the clean air experts today by calling 1-800-288-2023 or visit our website at www.aerovexsystems.com.

Congratulations! You have taken the right step to improving the quality of your air with The One That Works™.

Getting Started:

Unpacking The One That Works™

After opening the box you will see a black plastic funnel sitting on top of your new air purifier (photo A). Be sure to save the funnel as you will need it for future carbon replacement (see the maintenance instructions section). Next, gather the plastic bag surrounding the air purifier (photo B). With two hands, firmly grip the plastic bag and lift your air purifier out of the box. You are now ready to begin using The One That Works™! Centrally locate The One That Works™ for optimal performance. Against the wall is fine, but do not place it in a corner.

A. Save the funnel for future use.

B. Firmly grip the plastic bag and lift the air purifier out of the box.

MAINTENANCE INSTRUCTIONS

STEP 1

Carbon Replacement

In order to guarantee that The One That Works™ is always providing fresh air, you must replace the activated carbon every 4 or 6 months. If you are not already signed up for our Carbon Convenience Plan, call 1-800-288-2023 to schedule your automatic shipments. As a member of our Carbon Convenience Plan, your air purifier's 1-year warranty will be extended to a 5-year warranty when maintenance guidelines are followed.

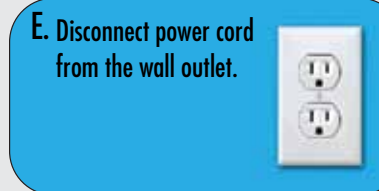

The activated carbon is packaged in an 8-pound container with a convenient handle for easy use. Each container has enough activated carbon for one complete change.

STEP 2

Remove Top, Quick Disconnect

To replace the activated carbon, begin by disconnecting the power cord from the wall outlet. Remove the 3 wing nuts on the top cover.

E. Disconnect power cord from the wall outlet.

F. Remove the 3 wing nuts
