

Frequently Asked Questions (FAQ):

Q. How many nail stations and/or pedi chairs will the HealthyAir® Nail Source Capture System serve?

A. This system will serve up to (2) mani stations and/or pedi chairs at one time. Each system includes a plastic cap which can be used to seal an inlet, thus giving the user the ability to serve (1) station/chair at a time.

Q. Does the HealthyAir® Nail Source Capture System: Dual Inlet w/ Outside Vent

A. The simple answer is yes. The IMC (International Mechanical Code) has been adopted in 46 states (excluding CA, VT, HI & ME), which requires all newly opening nail salons to have a source capture system serve each manicure station & pedi chair. The air which exhausts out of the source capture system must vent to the outside. The Nail Source Capture System (with outside vent adapter) provides a minimum of 62 CFM at each inlet (on the low setting), and a max of 95 CFM (on the high setting). Please see the table for the air flow results listed under the “Specs” section in link above.

Q. How loud is the HealthyAir® Nail Source Capture System: Dual Inlet w/ Outside Vent?

A. The volume of the HealthyAir® Nail Source Capture System: Dual Inlet w/ Outside Vent is 51-56 dB, which is quieter than normal conversation level.

Q. Do filters come with the HealthyAir® Nail Source Capture System: Dual Inlet w/ Outside Vent?

A. Yes. The system comes with an Integrated Filter Module, which is comprised of (1) High capacity dust filter, (1) eHEPA® filter, (1) and activated carbon filter.

Q. When do the filters need to be replaced?

A. Typically, they should ideally be replaced every 4-6 months depending on the nature and frequency of use. Every 12 months if the salon provides less than 1 service per week; Every 6 months – for salons that offer 1-5 services per week; Every 4 months – for salons that offer 5 or more services per week.

Q. Is it easy to setup and maintain?

A. Yes. We recommend reviewing the unboxing video above, which covers important details to setup and maintenance.
