

## The One That Works Frequently Asked Questions

### **Q: The One That Works: Is the air purifier easy to install?**

YES! In fact, it is simple, and there is no installation required. Simply take the air purifier out of the box, removing the shipping brace, plug it in the electrical outlet and it is ready to use!

### **Q: The One That Works: Does the air purifier create cool airflow patterns?**

No. The unique "fountain airflow" sends the clean air towards the ceiling, and will not change the temperature of the salon air.

### **Q: The One That Works: Will one unit purify all the air in the salon?**

By determining the appropriate model for your salon, usually, one unit is all that is required. For large salons with high ceilings and high levels of pollution, more than one unit may be required to maintain fresh air throughout the salon. Call us today for your free consultation at 1-800-288-2023

### **Q: The One That Works: Does it really work?**

YES! "The One That Works" is the only air purifier designed specifically for nail & hair salons. Our consultation will result in a recommendation for the appropriate model for your salon. When your customers walk into your salon there will be no appreciable difference between the fresh air outside and the fresh air inside your salon.

### **Q: The One That Works: Where should the air purifier be placed?**

The Salon chemical vapors are heavier than air and tend to migrate towards the floor. That is why the purifier should be placed on the floor, in the center of the Salon. Or, up against the wall towards the center of the Salon. Do NOT place the purifier in the corner of the room.

### **Q: The One That Works: How economical is the machine?**

Very. The High Speed uses 135 Watts, and the Low Speed uses 90 Watts.

### **Q: The One That Works: How often should I change the carbon in my "The One That Works" Air Purifier?**

We recommend changing the carbon every 4 or 6 months to ensure optimal performance. If you have 3 nail technicians or under and are not operating more than 8 hours a day, then you will need to change the carbon around every 6 months. If you have 3 or more nail techs and operate more than 8 hours a day, then we recommend you replace the carbon every 4 months.

### **Q: The One That Works: Does the air purifier take up a lot of space?**

No, the air purifier is only 15" tall and has a 16.5" diameter. It is also very easy to move around with the 3-wheel mobile cart available.

**Q: The One That Works: Are there expensive filters to buy and replace?**

No, the outside dust filter is machine washable. Wash the dust filter approximately every 2 weeks or once per month. There are no filters or cartridges inside the unit to replace. Simply change the Activated Carbon every 4 or 6 months (approximately 43 cents per day).

**Q: The One That Works: Is the room air purifier noisy?**

The room purifier has two speeds. The Low speed is very quiet and is the standard-setting. The High speed is louder and used for emergencies such as chemical spills and is used to clean the air quickly. At high speed, the purifier sounds like an average residential fan.

**Q: The One That Works: What are additional control measures that are available to maintain fresh air quality?**

We also offer source capture ventilation units that capture salon dust and chemical vapors at the technicians breathing zone. In addition, we have special filters for your HVAC system which remove salon dust and chemical vapors from the salon's HVAC systems.

**Q: What area or level of pollution does it handle?**

It covers up to 3000 sq ft, 30,000 cubic ft, or 6 nails stations

**Q: What is PCO technology?**

The One That Works with PCO technology utilizes shortwave UV light and incorporates active advanced photocatalytic oxidation which is based on naturally occurring processes.
